

HTML → PDF text spans

Demonstrates the pdf/html package: inline HTML is parsed into Spans carrying Style (Bold, Italic, Underline) and Class. The caller switches fonts and applies class styles at render time.

1. Tags , <i>, <u>

Normal text, then bold text, then normal again.

Normal text, then **bold text**, then normal again.

Normal text, then <i>italic text</i>, then normal again.

Normal text, then *italic text*, then normal again.

Normal text, then <u>underlined text</u>, then normal again.

Normal text, then underlined text, then normal again.

↑ underline (tracked)

strong and em work too.

strong and *em* work too.
