

Invoice — struct-tag cell generation

Header row and data rows are built with `pdf.HeaderCellsFromStruct` / `pdf.CellsFromStruct`.

Ref	Description	Qty	Unit price	Subtotal
A-001	Mechanical keyboard, TKL, Cherry MX Brown	2	€89.95	€179.90
A-002	27" 4K IPS monitor, 144 Hz, USB-C	1	€549.00	€549.00
B-010	USB-C to DisplayPort cable, 2 m	3	€14.99	€44.97
B-011	Wireless mouse, ergonomic, rechargeable	5	€34.50	€172.50
C-003	Laptop stand, aluminium, adjustable height	2	€49.00	€98.00
C-007	Desk cable management tray, black	4	€18.75	€75.00
Subtotal (excl. VAT)			€1119.37	
VAT 21%			€235.07	
Total (incl. VAT)			€1354.44	

The table above was built with:

```
headerCells, _ := pdf.HeaderCellsFromStruct(invoiceItem{})
for _, item := range items {
    cells, _ := pdf.CellsFromStruct(item)
    tbl.AddRow(pdf.Row{Cells: cells})
}
```

All alignment, background, format, and border options are read from the `cell` struct tag on each field. No manual `pdf.Cell{}` literals needed.
